Program undertaken with the financial support of the Government of Canada provided through Global Affairs Canada.

Climate Action in Africa

Funded by Global Affairs Canada. Implemented by Alinea, Econoler and WSP

Climate Action Africa supports the deployment of short-term technical assistance and results-oriented South-South knowledge exchanges between Sub-Saharan Africa countries, facilitating the sharing of climate-related expertise and lessons learned.

Based on needs identified at the local level, the Expert Deployment Mechanism for Climate Action Africa Project deploys Canadian climate change experts to partner with governments, NGOs, the private sector, civil society organizations and post-secondary institutions on targeted, short-term technical assistance projects in support of implementation of the Paris Agreement across the region - with a focus on increasing women's capabilities to fully participate as active agents of change.

Project Pillars

Building Climate Change Governance Capacity

Climate Change Mitigation in the Energy and Forestry Sectors, and Climate Change Adaptation in the Water Resources and Agriculture Sectors

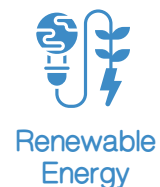

Women's Participation and Leadership in Climate Action

Short-term technical assistance includes but is not limited to:

- NDC updates & related policies & strategies
- Funding proposals to access climate finance
- Policy reforms to overcome barriers to climate investments
- Development/updating of ITMOs, MRVs for Biennial Transparency Report etc.

- Increased RE ambitions in NDCs & Promotion of alternative energy sources
- Regulatory & fiscal policy frameworks
- Capacity to plan & implement RE projects
- RE feasibility assessments

- Capacity of forest institutions to respond to climate change
- National REDD+ strategies & capacity to implement REDD+
- Forestry conservation measures
- Equity and inclusion in forest carbon incentive mechanisms

- Community water management plans and climate-resilient drinking water & sanitation systems
- Restoring and protecting wetlands
- Food – Water – Energy Nexus
- Disaster risk reduction management

- Climate data systems
- Climate resilient agriculture
- Indigenous and traditional knowledge
- Finance mechanisms for women farmers

- Gender-responsive climate curricula and training programs for women and youth
- Shared learning and knowledge exchange
- Stakeholder engagement
- Policy and planning

Process and Flow
